

Turn your mobile phone into a walkie talkie system and contact your staff instantly, anywhere in the world for free!

Instant and Secure Press-to-Talk (PTT) System

Just like a walkie-talkie network, at a press of a button you can instantly call and talk to one or everybody in your group, at no cost, anywhere in the world.

For security and privacy we also encrypt your calls to ensure your privacy during the conversation to prevent unauthorised listening or eavesdropping.

Designed for fast communications for the Police, Security, Government, Hospitals Transport and Public Utilities,.

The Nabishi Secure PTT System communicates anywhere, from one country to another, and because you do not need to dial up, the call is instant and there are no expensive call charges.

The Secure PTT system works seamlessly over any GSM network in the world using the 3G, GPRS, EDGE as well as WiFi.

Call us today for a free trail.

Main Features

- Instant contact between office and drivers or staff
- Free calls both ways
- Instant response to customer queries
- Staff or personnel can conference-call in teams
- Total security for a lone worker
- Call or from anywhere in the world
- Uses (GSM) 3G, GPRS, Edge or WiFi
- Calls are Encrypted for security

Benefits

- Better staff productivity
- Massive savings on mobile and landline call bills
- Meets employment regulations
- Immediate customer satisfaction
- Better engagement and motivation from staff

Technical Specifications

How does it work?

Push to Talk (PTT) is like turning your mobile into a walkie-talkie but with a global world-wide and virtually unlimited range. The secure PTT system works on Nokia handsets and across O2, Vodafone, Orange and any GSM networks. Instead of transmitting/receiving radio frequencies, Push to Talk uses either WiFi 3G, GPRS or EDGE data connection on your mobile phone to send and receive calls in encrypted mode using VOIP technology.

Compatible with Bluetooth or wired earpieces

For safety while driving or hands free operation the PTT system will work normally with your usual Bluetooth as well as any wired earpiece or headsets which are generally available for use on the Nokia phones.

Data usage

Most service providers allow a capped data allowance as a part of your monthly usage but you will have to check with your mobile operator which data package you currently have with them. During the encryption process we have compressed the data needed for voice to only 1kbps, so data is only used when you're speaking but not for any elapsed time during a conversation. We estimate an average of 20Mb is required per month. Wifi usage is not charged by the Cellular network so its use is normally free.

GSM Phone Compatibility

The PTT system currently works on selected Nokia phones featuring **S60 3rd Edition with Feature Pack 2** as well as **S60 5th Edition Nokia phones**. The PTT system will shortly be available on HTC, Blackberry and Google Android phones. A complete and updated list can be found at www.securevoice.co.uk
